Special Issue

Construction Structure Health Monitoring for Sustainable Built Environment

Message from the Guest Editor

It is our pleasure to announce a new Special Issue "Structure Health Monitoring for Sustainable Built Environment" of the journal Sustainability. As we know, structure health monitoring (SHM) for built environment around us, is vital for preventing further economic or life losses, no matter whether this is for a skyscraper, or civil infrastructures like bridges, dams, etc. There are two main approaches in structure health monitoring (SHM) at present; model-based and data driven. The applications of structure health monitoring (SHM) are instrumental to the evaluation of the condition of built structures and prediction of the remaining life of structures. We hope that this Special Issue can attract high-quality papers that contribute to damage assessment, the prediction of remaining life and decision making related to built structures or environments. This Special Issue welcomes contributions from the following themes (this list is not exhaustive):

- sensing solutions for SHM;
- data analysis techniques for SHM;
- damage detection techniques;
- artificial intelligence in SHM;
- residual life prediction
- novel applications

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
