

## Special Issue

# Contributions of Geological Research to Sustainability

### Message from the Guest Editors

Human civilization across time and geography has used geological bodies, both terrains and substances extracted from them for preparing diverse products. Hence, it is essential to promote suitable management options for the use of ground surfaces and their products, attempting to ensure their persistence for the future and minimizing undesirable impacts on the other components of the environment. The management of space, both at the surface and underground, contributes to human civilization through the selection of suitable places for built structures and the preservation of other natural resources. The assessment of the sustainability of choices must take into consideration the consumption of resources, emission of pollutants, and generation of wastes. This Special Issue will consider geological research in a very wide sense that includes the study of the performance of geological materials and the undesigned evolution of built structures, especially regarding materials that can be considered analogues of geological objects. High-quality manuscripts with new results or new game-changing ideas, as well as comprehensive reviews that offer new perspectives are welcome.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
