Optimizing Supply Chain with Air Cargo

Message from the Guest Editors

Today's companies are transporting and delivering perishables and manufactured goods in a more timely and efficient manner than ever before through air cargo solutions. New technologies that provide information during air shipments are transforming how companies do business and allowing them to stay ahead of the competition in their industries. As air cargo services continue to evolve, businesses discover new ways to increase efficiency and cut costs.

In line with this discourse, we invite theoretical and empirical papers on but not limited to the following thematic areas:

- Air cargo operations;
- Air cargo supply chain;
- Airport operations;
- Efficiency and productivity measure for air cargo and airports;
- Air cargo and uncertainty;
- Airline networks;
- Hub and spoke system;
- Supply chain strategy and air cargo; and
- Combination carriers vs. integrators, among others.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
