

Special Issue

Creative Economy for Sustainable Development

Message from the Guest Editors

In this Special Issue, a broad definition of creative economy is employed that includes all human knowledge, skills, abilities, states of life (happiness, security, etc.), traits, and life attitudes that result in economic activities based on intellectual property rights and appropriate behavioral and motivation rules. This being the case, the creative economy constitutes an alternative economic world for the future economy. Such determination of creative economy may have a reference to several economic sectors and activities such as the entrepreneurial, educational, health, cultural and financial sectors and any kind of economic activity that originates from research and development activities.

This Special Issue aims to publish high-quality theoretical or empirical research papers that highlight the direct and indirect channels through which the concept of creative economy may lead to sustainable economic development and identify other factors that intervene in this process. International or country-specific research is welcomed.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada
