

Special Issue

Deep and Fast Retrofitting of Existing Buildings to Improve Energy Performance and Comfort Conditions

Message from the Guest Editors

Energy efficiency is crucial: buildings will have to consume only the energy they really need. Retrofit interventions will have to be affordable and economically convenient. Electrical heating and cooling system feed by renewables will have to be widely promoted. Materials and technologies adopted to carry out renovations will have to contribute to minimize buildings footprint. Renovation strategies will have to be targeted to improve comfort conditions and internal air quality of indoor spaces. Green buildings transition will have to be coupled with the digital one, both in terms of design and management processes (building information modelling) and performance monitoring and controlling (smart buildings and energy distribution systems). Finally, renovations will have to respect design, craftsmanship, heritage and public space conservation principles.

This Special Issue aims to collect and illustrate practices and models of retrofit interventions of high architectural quality, able to achieve NZEB target and to improve comfort conditions within existing buildings.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
