

Special Issue

Degradation of Plastics in the Environment

Message from the Guest Editor

Plastic pollution is a well-acknowledged world-wide issue; it has been found in air, marine, and terrestrial environments and, as expected, has entered the food chain. Plastic particles have been found in tissues of marine and terrestrial animals as well as in human feces. Due to improper management and disposal practices, plastic particles enter the environment and undergo deterioration, leading to a decrease of their mechanical and physicochemical properties. As a result, they break down into smaller particles—so-called microplastics. This Special Issue aims to present up-to-date information about the fate of plastics in the recipient environment and produce insights about the biodegradation potential of plastics by microbial communities and/or enzymes. This Special Issue focuses on but is not limited to topics such as biodegradation of fossil-based and biodegradable plastics in aquatic/terrestrial environment, the fate of plastics and plastic additives in the environment, enzymatic degradation of waste plastics in a circular economy, biotechnological solutions towards upcycling plastic waste, and the generation of microplastics in the environment.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
