Security Technology-Driven Development for Sustainable Networks

Message from the Guest Editors

Due to the need to promote a sustainable society and economy, the concept of sustainable development has been continuously applied to the environment, energy, management and other social science fields. Due to the widespread nature of social media, the issue of the sustainable development of the network society is gradually receiving attention from all walks of life. The sustainable development of a network society requires a high level of security for its network ecosystem, including, but not limited to, the protection of information transmission, privacy, property transaction security, etc. While ensuring that the legitimate rights and interests of people are better protected, better sustainable development can be achieved through a network society. We look forward to receiving your contributions. Dr. Limei Peng Dr. Ali Kashif Bashir *Guest editors*

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
