

Special Issue

Digitalization Leading the Way for a Sustainable Future

Message from the Guest Editors

Digitalization is having a substantial impact on the economy and society and making our daily activities dependent on innovativeness and use of digital technologies. Digital technologies are being applied in socioeconomic, environment, climate change, and sustainable problems in order to cope with the given problems and to increase their efficiency. The aim of this Special Issue is to collect theoretical and practical analyses of the digitalization of the economy and sustainability for different actors (individuals, workers, firms, regions, countries...). It aims to understand how digitalization can foster a sustainable development of the economy of different countries or regions and what are the solutions to shift to a more sustainable economy through digitalization. This Special Issue also welcomes contributions at the methodological level presenting new ways of capturing the digitalization and sustainability of different sectors of the economy. It is also open to case studies (policies at country level, management at the firm level, local policies, etc...).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
