

## Special Issue

# Disaster and Emergency Logistics: Sustainable Solutions from a Social, Ecological and Economic Perspective

### Message from the Guest Editor

The research methodology for papers in this Special Issue includes but is not limited to analytical and/or simulation models, conceptual papers, empirical studies, and case studies. Analytical and/or simulation models should have a clear motivation in real problems and a solid practical foundation—for example using real-world data or showing evidence of communication with humanitarian practitioners. The topics of interest of this Special Issue include but are not limited to the following.

- Factors which affect aid agencies' choice of reuse, product recovery or disposal;
- Comparison of reverse logistics management in the commercial and humanitarian sectors;
- Coordination/collaboration mechanisms which enhance aid agencies' end-of-use activities;
- Product designs of relief items and/or equipment which facilitate stakeholders' reverse flow management;
- Health care waste management in disaster and emergency logistics;
- Debris management in disaster and emergency logistics.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
