Drinking Water Sustainability: Challenges and Solutions

Message from the Guest Editors

The Sustainable Development Goal (SDG) 6.1 aims to “achieve universal and equitable access to safe and affordable drinking water for all by 2030”. However, drinking water sustainability is threatened by natural disasters, climate change, lacking or failing infrastructures and socio-economic inequalities. Technological advances could allow targeted mitigation strategies, but these need to align with local and national governance mechanisms and consider social factors that can either support or undermine the sustainability of drinking water quality. This Special Issue aims to highlight research on the diverse challenges that threaten the sustainability of drinking water and lessons learnt to achieve SDG 6.1

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
