

Special Issue

Ecological Footprint and Sustainable Natural Resources

Message from the Guest Editor

Natural resource management is the optimal solution to conserve natural and environmental resources to achieve environmental sustainability. The cost of carbon pollution hinders achieving healthcare sustainability while also affecting the flora and fauna of the country. The resource curse hypothesis is mainly evident across different economic settings. The important aspect of ecological footprints in natural resource management is a new policy concept that can be utilized for the resource conservation agenda. The structural shift from the agriculture sector to the industrial sector increases the country's economic growth at the cost of carbon pollution and natural resource depletion. Hence, it is highly needed to improve sustainable consumption and production behavior to achieve clean and green economies. The call for this Special Issue is designed to fill the existing literature gap by evaluating the nexus between ecological footprints and resource conservation agenda, which is essential for achieving the United Nations Sustainable Development Goals.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
