Special Issue

Harnessing Electrical-to-Chemical Energy for Sustainable Conversion

Message from the Guest Editors

The conversion of clean electrical energy into chemical energy for the ease of storage is an ideal method for the development of sustainable energy resources, as well as the green and efficient synthesis of chemicals. Advanced electrocatalytic systems are at the core of high-efficiency electrical–chemical energy conversion, covering a wide range of scientific fields with magnitudes ranging from the atomic scale to the macroscale, including catalyst structure control, mechanisms of multiphase interface charge-transfer catalytic reactions, and the engineering design of electrocatalytic devices and equipment. According to the current state of development in the field of electrocatalysis, significant breakthroughs are expected in the next five to ten years in both basic and applied research fields. The basic research fields include, but are not limited to: (1) innovative types of electrocatalytic reactions, (2) comprehensive molecular activation–transformation pathways, (3) in-depth analysis of rate-determining steps in catalytic reactions (chemical kinetics, charge transfer, and molecular mass transfer), and (4) novel structure design of electrocatalytic materials.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon
School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
