

Special Issue

Modeling Building Energy and Environmental Systems in the Built Environment

Message from the Guest Editor

This Special Issue focuses on recent advances in modeling building energy and environmental systems in the built environment. The scope of this Special Issue entails modeling building energy and environmental systems at different scales ranging from the building components (e.g., blinds, light fixtures) to city-scale modeling. This issue welcomes submissions that verify and validate their models with measured data or on-site collected data. Possible topics of interest are:

- Developing next generation of building energy and environmental systems modeling tools to design, operate, and retrofit buildings
- Establishing novel building energy modeling techniques to account for the building scale, urban scale, district scale, and city scale
- Leveraging building information modeling (BIM), geographic information system (GIS), industrial foundation classes (IFC), digital twins, or similar tools to model building energy and environmental systems in the built environment
- Advancing our modeling techniques to quantify impacts of occupancy patterns and behaviors in residential and commercial buildings

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
