

Special Issue

Green Energy, Economic Growth and Environmental Quality Nexus

Message from the Guest Editors

The carbon neutrality target implies net-zero CO₂ emissions and encompasses systemic changes in energy, the economy and the environment. A more complete understanding of green energy, economic growth and the environmental quality nexus can help us realize these goals.

This special issue is to provide a communication platform to exchange new perspectives, discoveries, methods and policy suggestions for the transformation of global and regional energy, economy and environment systems. Original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- New theoretical methods and policy connections for energy, economic and environmental research;
- Theory and practice of green transformation of energy, economic and environmental systems;
- The impact of the carbon emissions trading market on green energy and environmental governance;
- Research on the coupling and decoupling of energy, economy and environment in typical regions and key industries;
- Assessment of the impact of globalization/de-globalization on carbon neutrality;
- The impact of financial development on green energy and environmental quality.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
