Energy Transition and Cities: Renewable Energy Storage, Production and Social Issues

Message from the Guest Editors

Research into energy transition from carbon to renewable energy sources points to the importance, and possible conflicts, of enlarging the footprint of renewable energy generators into the public space. The future planning of our cities will require a greater sensibility to innovative design thinking for the integration and occupation of space.

We would like to discuss how integrated urban design with renewable energy systems can contribute to re-imagining the future public space. Some questions to be explored are: how to design new concepts for public spaces, that couple the energy generation function with other, new functions, that are people-oriented? How to involve the citizens in the process of producing the energy they need in a socially and economically sustainable way while preserving the living environment? Are there cases where creative ways of thinking have been applied to couple energy communities with community gardens and citizens urban spaces reclamation? To what extent and through what means are public administrations increasing capacity building?

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
