

Special Issue

Environmental Planning and Modeling

Message from the Guest Editor

The aim of this special issue is to facilitate environmental decision making by considering the natural environment, social, political, economic and governance issues. This offers a holistic approach to achieving sustainability.

It is a win-win for both the society and the environment as a holistic view of the natural environment is taken. It is therefore imperative that models developed as decision supports to enhance environmental policy and decision making consider the vital influences of socio-economic, political, and governance issues in effective decision/policy making. Thus, papers of interest in this special issue will be integrative of these factors and may either build a framework to consider these factors, develop novel methods or models, or apply existing models to solve any of the environmental management problems.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
