Special Issue

Enzymatic Conversion and Sustainability

Message from the Guest Editor

Enzymes are able to catalyze numerous reaction pathways while achieving a high reaction specificity under mild conditions. Enzymatic reactions are thus believed to minimize the requirement of hazardous materials and the formation of byproducts, thus contributing to development of sustainable reaction routes.

Target substrates and the resulting products in enzymatic conversion are currently expanding because of attempts to connect green and sustainable chemistry principles to conventional chemical reactions.

The fact that new enzymes are continuously discovered as advanced techniques on cultivation, heterogeneous gene expression, and metagenomics are continuously developed also encourages deployment of the enzymes for chemical transformation. Beyond the use of native enzymes, in-depth understanding of enzymes structures, functions, and kinetics allows for sophisticated engineering of enzyme activity and ultimately leads to bulk production of several genetically modified enzymes. Adjuvant agents have made enzymatic conversion more attractive in terms of product efficiency and enzyme recyclability.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
