Special Issue

Plant Breeding Supporting the Sustainable Field Crop Production

Message from the Guest Editor

Improving the sustainability of agricultural production has key importance. Plant breeding is the first step of achieving sustainable farming because the plant's adaptability, resistance and yielding capacity could be driving factors. Climate change and extreme weather events are the major factors that underline the need for varieties and hybrids having wide adaptation capacity. The modern breeding programme should focus on improving abjotic and biotic stress tolerance and biodiversity as well. Field crop production is in charge of environmental pollution and reducing biodiversity and the health status of ecosystems. Water scarcity is a merging issue worldwide, therefore improving the water and nutrient use efficiency of the cultivated crops could contribute to reserving the limited resources. The reduction of water demand could decrease the yield losses under drought conditions and lower irrigationwater demand could prevent the destruction of soil conditions, while soil health status is also a key factor in field production. The Special Issue welcome submissions related to above theme.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
