# Sustainable Finance: New Trends, Environment and Social Changes

# Message from the Guest Editors

The term "finance" often refers to the optimization of shareholder value and the maximization of profitability and return on investment. It is habitually synonymous with the pursuit of economic growth and development, at times at the cost of increasingly scarce natural resources. However, in the wake of the environmental, social and governance (ESG) challenges of the 21th century this version of finance, is seriously contested. Now, corporations and institutions, NGO's and governments need to assume responsibility for the impact of their activities on their stakeholders. In response to these challenges, business leaders, policy makers, activists and academics suggest the need to integrate financial activity into the broader economic activity and then to anchor it into social activity. Lagoarde-Segot and Parangue (2018) consider that this integration implies reaffirming the primacy of social objectives over economic and financial objectives, which are the only means to achieve them. This has led to the development of "Sustainable" Finance" and the emergence of a number of new challenges related to environment and society, particularly in the time of COVID-19.

# **About the Journal**

# Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
