

Special Issue

Fire and Air Pollution

Message from the Guest Editor

This Special Issue examines fire-related air pollution through an interdisciplinary lens by addressing interconnections between fire pollution and environmental, climatic, and/or human health impacts. Studies should explore methods to reduce uncertainties in estimates of fire activity, methods to assess air pollution effects, and/or subsequent health, sustainability, or environmental outcomes. I am particularly interested in studies that elucidate mechanisms between multiple aspects of this interconnected system. Studies that assess trade-offs with policy interventions to reduce fire-related air pollution or the negative consequences are encouraged. I also strongly urge submissions that examine the influence of fire pollution on vulnerable populations around the world. Given the breadth of this topic, submissions are welcomed across a range of spatial and temporal scales, from local studies to regional or global analyses, as well as retrospective or future scenarios. A variety of data collection and analysis approaches can be used to explore these topics. Submissions may include original research articles or comprehensive reviews.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
