

Special Issue

Food and Agriculture Economics: A Perspective of Sustainability

Message from the Guest Editor

Feeding the fast-growing population based on the current production system is now the biggest hurdle for sustainable growth. In this context, there is a clear need for an open debate to understand if and how this framework of policies will be able to support a sustainable agricultural and food system, with specific attention focused on the interaction with the economic and social sustainability of the agricultural and food system and market. This Special Issue aims at collecting high quality contribution that analyse, the following issues of food and agricultural economics and policy from the sustainability perspective:

- The propensity of farms to adopt sustainable practices, including organic agriculture.
- The role of policy incentives to promote sustainable practices.
- The value of the ecosystem services furnished by sustainable practices.
- The impact of massive adoption of sustainable production on the local and global agricultural and food markets.
- Risk perception of sustainable practices and its role in influencing their adoption.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
