

# Special Issue

## Forest Resources Management

### Message from the Guest Editor

The new challenges created with the global warming and, more recently, with the Covid-19 pandemic are opportunities to rethink the models of development and the ways that forest resources are managed. The global ecological footprint has increased over the last several decades. Governments and public institutions now need to deal with the necessity of economic growth in order to create employment and avoid social conflicts, and to mitigate the environmental impacts from the excessive use of resources and the excessive waste production. In this context, it is important and urgent to find new models to manage forest resources for a more sustainable development. The aim of this Special Issue is to bring insights about alternatives that make it possible to reduce the ecological footprint in the context of better forest resources management.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
