Special Issue

Geography and Sustainable Earth Development

Message from the Guest Editors

The essence of sustainable development is to achieve the dialectical unity of anthropocentrism and ecocentrism by taking into account the interests of both humans and non-human species. The goal of geography is to study the Earth's surface and transform it with the active role of humans, so as to achieve harmony between humans and the Earth. In the field of sustainable development research we have taken many steps. However, there are still some challenges that deserve attention. The purpose of this Special Issue is to further study the sustainable development of the Earth from the perspective of geography, based on the existing results, and to explore the linkage between the geographical framework and the sustainable development framework. Resource carrying capacity. global environment, and ecological security have always restricted the sustainable development of the Earth. This Special Issue hopes to form a certain research paradigm based on the framework of geography, so as to help human beings regulate production and lifestyles, promote sustainable development, and at the same time promote the development of geography itself.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario Institute of Technology, Oshawa, ON L1G OC5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
