Special Issue

The Global Economic Cost of the Paris Climate Agreement

Message from the Guest Editor

The Paris Climate Agreement represents the most ambitious and serious attempt to combat climate change to date. The only other experience has been the Kyoto Protocol, which has not fared well, possibly due to the limited participation and to its topdown structure envisaging binding absolute targets on emissions. While the Paris Agreement, with its voluntary and highly heterogeneous pledges, may turn out to be an effective agreement from the point of view of country participation, in its current form it still represents an insufficient effort in preventing global temperature increase by +2°C. Most relevantly, the economic efficiency of the Agreement made at COP21 is still unclear and the overall economic costs are a topic that as of now is still largely un-assessed and unresearched. This Special Issue is inviting contributions to an assessment of the overall cost associated with meeting the obligations specified in the NDCs, which are an integral part of the Paris Agreement. Additionally, the interest lies also in evaluating the costs of meeting the +2°C temperature target under both the case of full participation or only partial participation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
