Special Issue

Global Governance and Biodiversity Loss

Message from the Guest Editors

The COVID-19 pandemic has made global interdependencies blatantly clear, not only among human societies but also between humans, their production systems, and natural ecosystems. The pandemic has also shown distinctly global and local inequalities, as well as a variety of problems related to governance gaps in various fields—from health systems to biodiversity conservation. Recent analyses on the causes of biodiversity loss have shown the importance of international dynamics in driving land-use changes resulting in large-scale clearing of native ecosystems. The expansion of export-oriented mono-crops, mining, and timber extraction (to supply the consumption in distant world regions) is among the most important drivers of tropical biodiversity decline. This Special Issue aims to provide an outlet for studies dealing with the analysis of global relations, processes, interdependencies, and governance settings shaping biodiversity conservation and loss. Articles addressing the drivers of tropical biodiversity loss—and the associated governance challenges-across geographical scales are particularly welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
