

## Special Issue

# Green Finance, ESG and Financial Risk Management

### Message from the Guest Editors

Asset managers increasingly consider corporate social responsibility (CSR) as a safeguard for minimizing the financial risk of their investment. The application of ESG ratings to reflect corporate social responsibility and performance has received growing attention and is nowadays demanded by many financial investors. Recent studies have investigated how ESG measures are related to the financial risk of stocks. This relationship has implications not only for investors and creditors but also for firms as it might impact their cost of capital. This Special Issue is comprised of papers covering aspects of the financial risk implications of ESG. Papers that investigate how green finance does contribute to mitigate climate change are also included. The unit of the analysis can be that of investors, banks, corporations, or regulators. # About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
