Special Issue

Sustainability Challenges in Urban Heat Island Mitigation Strategies

Message from the Guest Editors

Urban heat islands (UHIs) have been evident in many cities. Existing evidence indicates that UHIs can cause numerous negative impacts on air quality, outdoor thermal comforts, public health, economic productivity, and energy consumption,, and thereby significantly deteriorate the urban environment. Extensive strategies have been developed to mitigate UHIs, such as urban greenery, cool materials, water techniques, and optimised urban morphology. However, it is still challenging to prioritise these strategies to support UHI mitigation as mitigation performances vary significantly with climatic and urban contexts. The application of such mitigation strategies is also affected by the policy, technical, social, and economic factors. This Special Issue aims to provide a platform to discuss challenges, opportunities, and solutions on the characterisation, assessment, application, and decision making of UHI mitigation strategies. The platform will support evidence-based urban governance for UHI mitigation and well-informed urban planning and design.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
