# **Special Issue**

# Impact of Technology on Sustainable Production

### Message from the Guest Editors

In recent years, there has been a considerable increment in the applications of multiple criteria decision-making (MCDM) techniques, such as data envelopment analysis, and multi-objective optimization models to evaluate the performance and efficiency of sustainable production processes. The operational research literature has focused on the main characteristics and effects that technological advances have for the implementation of recycling processes and green supply chains. The integration of these processes as part of the circular economy and their cumulative consequences for climate change define the subsequent research lines within the environmental science literature. The current Special Issue aims at expanding the analytical tools designed to formalize complex processes dealing with conflicting objectives that involve environmental variables. We welcome formal developments in MCDM techniques and novel extensions of multi-objective optimization models, together with their corresponding applications, designed to analyze the impact of technology on sustainable production processes.

### **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
