Global and Interdisciplinary Approaches to Indigenous and Local Knowledge in Conservation Ecology

Message from the Guest Editor

There is a large variety of existing indigenous and nonindigenous local communities with considerable knowledge of their local ecologies. Each of these has their own sociocultural context, ontology, epistemology, history and political situation. Ecologists and conservationists have heard more accounts from some such communities than from others about the ways that they understand encounters with ecological science or conservation, and the ways that they would like to encounter them. Inversely, there is relatively little reflection from the perspective of scientific epistemologies and ontologies about how science can best encounter ILK. This lack of methodological standardization poses problems of disciplinary fit, communication, and assessment, but equally allows the freedom to generate creative and innovative methods and outcomes. We particularly welcome contributions from Asia, Africa, and South America, from indigenous scientists and conservationists, and anthropological, STS, and epistemological perspectives, with the goal of facilitating interdisciplinary dialogues about the diversity of contexts and practices for ILK–ecological science engagements.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
