Innovative Advances in Monitoring, Control, and Management of Microgrids

Message from the Guest Editors

Microgrids are a new energy paradigm derived from the digital transformation applied to small-scale energy facilities. In this novel scenario, locally-available energy sources, storage equipment, and load supply are combined in a coordinated smart manner. Microgrids can include renewable/nonconventional energy sources as well as energy carriers such as hydrogen and can operate connected to the main power grid or in stand-alone mode. Microgrids, mostly those based on renewable sources, help to reduce environmental pollutants, greenhouse emissions, and dependence on fossil fuels, contributing to sustainable development. Large-scale deployment of microgrids requires facing a number of scientific and technical challenges, from design aspects to precise digital simulation of the facility. Among these challenges, severe research efforts are devoted to develop advanced monitoring, control, and management systems for microgrids. These systems are compulsory to deal with the uncertainties of renewable energy sources (photovoltaic, wind, etc.) and changes of the load demand in order to provide a reliable, energy-efficient, and environmentally-friendly operation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
