

## Special Issue

# Innovative Construction Materials for Sustainable Development

### Message from the Guest Editors

The increase in the population density leads society to consume more, build more, and increase production and economic growth. The production of construction materials needs high amounts of energy and, together with that, gives rise to significant CO<sub>2</sub> emissions.

Sustainability can be defined as a set of environmental, economic, and social conditions in which all society has the capacity to maintain and improve its quality of life without degrading the quantity, quality, or availability of natural, economic, and social resources. Given the significant growth in the field of civil engineering, the sustainability principle must be taken into consideration, particularly when producing materials. This requires a comprehensive assessment that takes into consideration human needs for life cycle assessment of construction materials (natural resources, industrial products, energy, transportation, housing, and efficient management of waste and materials) while conserving and protecting the quality of the environment and the natural resource base essential for future development.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
