Special Issue

Inter-disciplinary Analysis of Biodiversity Conservation

Message from the Guest Editors

Biodiversity constitutes a basic component of life at the different scales at which it is expressed, from the genetic variability of populations to the total number of taxons existing on Earth and the many intermediate levels existing in between. Biodiversity is essential to support the variety of ecosystem services (including those still unknown) which benefit human populations, from food to the maintenance of landscape and scenic values, as well as for providing basic resources for physical and emotional health. However, Global Change is fueling an accelerated loss of biodiversity, with cascading effects in many other problems. The reduction of biodiversity is taking place at multiple scales, from loss of genetic variability to extinction of species at local and global levels, where the mass extinction of species is estimated at rates several hundred or thousands of times higher than background or natural extinctions. Many scientists openly speak of a Sixth Mass Extinction on a planetary scale. More details

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
