Special Issue

Interactions and Effects of Different Climate Change Scenarios with Emergent Pollutants

Message from the Guest Editors

At present, a vast variety of substances arrives to the aquatic environment, including newly developed chemicals, usually called contaminants of emerging concern (CECs), posing a risk to a wide diversity of endogenous marine biological resources with ecological and economical relevance. For decades, classical pollutants (as trace metals) have been monitored worldwide, but regarding CEC studies, information on their environmental concentrations is still limited. Plastic pollution constitutes an additional stressor to the marine systems already under other sources of anthropogenic pressure. Understanding the real risks of micro(nano)plastics to marine wildlife requires knowledge on environmental levels and pathways of exposure, which is still in its infancy, especially in what concerns marine invertebrates. Alongside the impacts caused by classical and emerging pollutants, organisms in coastal ecosystems are exposed to environmental changes. Recent studies have demonstrated that CCrelated factors modulate the biochemical and physiological sensitivity of aquatic organisms to different pollutants, with responses being pollutant- and species-specific.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
