# Trends and Challenges in the Management of Technological Projects for the Sustainable Development in the Digital Revolution Era

### Message from the Guest Editors

The sustainable development agenda, established in 2015, is a set of global objectives for 2030, known as Sustainable Development Goals (SDGs), to transform the world by protecting the planet, eradicating poverty and ensuring worldwide prosperity. In this context, both stakeholders (governments, public sector, private sector, end-users, etc.) and technology play a key role in improving the quality of life and responding to society's socio-economic development challenges. The integration of sustainability in the governance and management of technology projects is a means to achieve these goals. Sustainability can be applied throughout the project life cycle, from ideation to delivery of the final product. For further reading, please visit [the Special Issue Website](#).

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
