Managing Forest and Plant Resources for Sustainable Development

Message from the Guest Editors

At the macro level, forest and plant resources management mainly includes forest investigation and monitoring, forest and urban forestry spatial planning, forest harvesting and utilization, etc., which mainly focuses on ecological security, wood production and forest plant functional benefits in various countries around the world. On the micro level, research on the sustainable management of forest and plant resources is mainly conducted to determine how to optimize the forest structure and maximize the output—that is, how to maximize the growth of wood. The sustainable management of forest structure is mainly related to the optimization and maximization of forest mingling, forest density and forest growth.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
