

Special Issue

Measurement and Evaluation of Sustainability Effects of Energy Policies

Message from the Guest Editors

This Special Issue is aimed at the measurement and evaluation of energy sustainability efforts and the effects of various sustainable development policies. We expect the submission of high-quality research that estimates and evaluates the effectiveness of programs in achieving target energy sustainability outcomes. The aim is to make judgments about the programs, to improve programs' effectiveness, and to inform decision makers about future program development. Impact evaluation assesses the changes that can be attributed to a particular energy policy intervention and answers how the outcome would have changed in the absence of the intervention. In contrast, outcome monitoring examines whether targets have been achieved and seeks to answer cause-and-effect. Such research used in evidence-based policy making supports decision makers in determining what works, what does not, and what quantifies the effects. This Special Issue intends to contribute to the development, enhancement, and application of measurement and assessment tools and processes in the area of energy to help to navigate the path toward sustainable development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
