

Special Issue

Multi-Criteria Analysis to Support Sustainable Decision-Making in the Built Environment

Message from the Guest Editors

Sustainable decisions in the built environment are often complex and multifaceted problems, which involve addressing and balancing a broad range of considerations, incorporating not only environmental information, but also economic and social aspects, technological and scientific data, ethical and political concerns, and stakeholder interests. In response to current sustainable decision-making challenges in the built environment, this Special Issue will conduct a comprehensive updated review of the trends and applications of MCDA to support sustainability decision-making and provide recommendations for applying MCDA techniques towards a sustainable built environment. Examining recent trends and applications may be useful and relevant not only for researchers and practitioners in order to identify new successful approaches and solutions to current challenges and limitations but also for potential users to understanding how can they effectively apply these trends in future decisions towards more sustainable development. The editors will support a wide range of methodological and technical approaches. In addition to theoretical and applied papers, review articles are also welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
