

Special Issue

Urban Multi-Mode Smart Traffic

Message from the Guest Editors

Dear colleague, As the city scale grows and functional layout structure changes, residents' travel demands show the characteristics of diversity, personalization, heterogeneity and collectivity. Meanwhile, advanced technologies such as the Internet of Things, cloud computing, mobile internet, artificial intelligence, and autonomous driving have gradually given transportation "smart" attributes. The topic of urban multi-mode smart coordinated travel arises at the historic moment. Multi-mode travel can effectively match travel demand with various transport, reduce urban carbon emissions, and improve road capacity and passenger travel comfort. Most trips are serviced by a single transport mode or rely on individuals to connect different modes of travel, without the attributes of collaboration and wisdom. Therefore, it is of great significance to study multi-mode smart travel in the context of intelligent transportation technology reform. The aim of this Special Issue is to gather original research and review articles, focusing on the information perception, demand analysis, and collaborative optimization of urban multi-mode smart travel.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
