

## Special Issue

# National Parks: Theories and Practices

### Message from the Guest Editors

Since the first nature reserve was built in 1956, China has made remarkable achievements in biological conservation and ecosystem management. With more than 18% of the territory covered by protected areas, China is now entering an era of increasing the quality and efficiency of the conservation of protected areas. A national park system and the reform of protected areas were proposed in 2015, and an overall plan for the development of the national park system was released in 2017. Currently, ten national park pilots around the country are undergoing an experimental period through an institutional innovation in management unit, financial mechanism, natural resource management, and community participation. By 2020, these pilots will be under scrutiny, and the first batch of national parks will be established under a hierarchical and integrated management system. This Special Issue aims to provide a forum for international/national scholars, researchers, policy makers, and administrators to review and report theories and practices at the levels of national policy design and pilot case study, which have been taken to fuel the national park construction in their countries.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
