

Special Issue

Nature-Based Solutions as Sustainable Engineering for Improving Water Security

Message from the Guest Editor

Dear colleagues:

Nature-based solutions (NbS) are “living solutions inspired by, continuously supported by and using nature, which are designed to address various challenges in a resource-efficient and adaptable manner and to provide simultaneous economic, social, and environmental benefits”. One societal challenge is water security: sufficient quality, quantity, and acceptable level of water-related risk to support human and ecosystem needs. NbS for water are relevant for both society and nature. The term NbS is often used as a transdisciplinary umbrella that encompasses existing concepts such as “ecological engineering” and “blue-green infrastructure” in engineering and existing concepts in other disciplines. Technology and engineering with and for nature remain a minor topic in academic discourse, despite their importance in sustainability transitions.

In this Special Issue, we gather analyses, frameworks, viewpoints, and experimental evidence in the use of NbS or techno-ecological NbS for improving water security. We hope that bringing this knowledge together will advance the scientific and policy discussion in this nascent field.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
