Greening Our Environment: Nature Driven Solutions for Regenerative and Resilient Cities

Message from the Guest Editor

Major problems such as biodiversity loss, climate change and environmental damage resulting from resource depletion and the way we grow our food, generate energy and use water are all symptoms of an old pattern. This Special Issue aims to focus on integrated approaches to regenerative and resilient development by design. This Special Issue calls for papers that:

- Look for synergistic approaches to regenerative urban and/or rural planning and development;
- Provide examples of design-led ways to comprehensively increase the quality of life and sustain life in communities, cities, regions and countries;
- Illustrate how nature-driven resilient urban development deals with the complexity of problems.

We are looking for research outputs that are cross-cutting and interdisciplinary and take nature as the driving force for developments. There is a significant difference between nature-based and nature-driven development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
