Sustainable Research on the Nutrition Security and Food Policy

Message from the Guest Editor

Food and nutrition security is a cornerstone of sustainable and healthy diets and food systems. Achieving food and nutrition security, due to the world's population growth, is an urgent matter that depends on collaborative efforts from individuals, governments, and the private and public sectors. There is a need for research that promotes food and nutrition security of individuals and communities through food policy. Therefore, we seek research that addresses food and nutrition insecurity issues at individual and food policy levels. More specifically, we are looking for qualitative and quantitative research which explores food policy development, implementation and effectiveness in addressing food and nutrition insecurity issues at local and global levels. In addition, the COVID-19 health crisis had significant impact on food and nutrition security. There is a need for further research on the impact of COVID-19 health crisis on food and nutrition security and diet quality from a food policy perspective. Therefore, we are looking for research that addresses COVID-19-related food and nutrition insecurity through policy development and implementation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
