Reflections about Sustainable Occupational Health after COVID-19 Pandemic

Message from the Guest Editors

The COVID-19 pandemic brought occupational risks to work contexts in which they would not normally be present, as in the case of biological risks, and intensified other risks, for example, psychosocial ones. The work context underwent changes never seen before in the time span covered. In many cases, work has been transferred to the home, and in others, there has been an intensification of work, for example, at the level of the health sector. The health consequences associated with exposure to all these factors have relevant impacts on workers, families, organizations, and society in general. The purpose of this Special Issue is to provide an exchange of ideas and an up-to-date overview of occupational health in the context of COVID-19, with a focus on emerging themes, and on prevention to be developed and implemented to promote the sustainability of workers' health.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
