

Special Issue

Sustainable Operations and Supply Chain Management for Small Businesses and Multinational Corporations

Message from the Guest Editor

Sustainable supply chain management requires a multi-tier perspective and a holistic approach, considering every stage in a product's life cycle. Supply chains are complex structures with multiple organizations comprising both small businesses and large corporations. The challenges, opportunities, and strategies in implementing sustainable operations are wide and varied, with the links between them relatively unexplored. As such, there is scope for new insights and research into the area. This Special Issue will comprise a selection of theoretical and empirical papers covering the breadth of supply chain operations and the sustainability considerations faced by businesses. Topics include sustainable sourcing and supplier management, sustainable warehousing, green logistics and transportation, sustainable product design and packaging, cleaner production, sustainable retail, and closed loop systems in supply chains. Papers should provide implications for sustainable operations and supply chain management from the perspectives of small businesses and/or multinational corporations.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
