# Sustainable Pasture and Rangeland Management

### Message from the Guest Editor

Pastures and rangelands occupy 40% of earth's land area and occur in a range of climatic zones, from wet and humid ecosystems to arid landscapes (FAO 2006). Production of red meat and milk from these locations is an essential component of human nutrition across the world, including both developed and developing countries. The sustainability of pastures and rangelands across the globe is a contested issue with concerns around land degradation, deforestation, nutrient excess, and greenhouse gas emissions. This series of articles within this Special Edition will provide examples of pastoral systems throughout global climates where management practices have increased the sustainability of the ecosystem while improving productivity and profitability for producers.

# **About the Journal**

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
