

Special Issue

Plant Environmental Stress Physiology and Sustainability

Message from the Guest Editor

This Special Issue is focused on plant environmental stress physiology and sustainability. Investigation and understanding of plant stress responses to various abiotic stressors (temperature, water, radiation, chemical and mechanical stress) can contribute to sustained and increased productivity, as well as improved quality of crops under today's changing environment. New and innovative findings/opinions apropos of (bio)controlled stress management, methodology and technology can improve sustainable plant protection in the future. The selected papers cover results of basic and applied sciences which can serve sustainable agriculture based on the understanding of plant physiological responses to diverse environmental stresses and provide information for a practical purpose.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
