

Special Issue

Fate, Distribution, Effects and Control of Persistent and Emerging Organic Pollutants

Message from the Guest Editors

Persistent organic pollutants (POPs) are compounds resistant to environmental degradation. These emerging organic pollutants include but are not limited to pharmaceuticals, antibiotics, pesticides, industrial chemicals, surfactants, and personal care products.

Many of these pollutants are synthetic, and can enter the environment. Nonetheless, these pollutants' fate, distribution, toxicity, and behavior are largely unknown. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Occurrence and measurement techniques of persistent and emerging organic pollutants;
- Fate, distribution, and transport;
- Human health impacts and environmental risk assessment;
- Control and remediation technologies for the treatment and removal of pollutants.

We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
