

Special Issue

Sustainable Construction Management Practices and Productivity

Message from the Guest Editors

Sustainable construction aims at incorporating sustainable development concepts into conventional construction practices. Thus, sustainable construction can be achieved by implementing sustainable development principles and practices in the construction industry. On the other hand, the implementation of sustainable construction management practices could influence productivity in construction projects. However, thorough investigations of the effects of implementing sustainable construction practices on productivity were not carried out. This Special Issue will identify and prioritize sustainable construction practices that increase productivity and achieve sustainability in the built environment. Research areas may include the following:

- Green construction management practices;
- Sustainable construction management strategies;
- Framework for sustainable construction;
- Sustainable construction practices;
- Decision-making models for sustainable construction management;
- The effects of sustainable construction practices on labour productivity in construction;
- Modelling the relationship between sustainable construction management practices and productivity.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
