

Special Issue

Project Management for Sustainable Construction

Message from the Guest Editor

The use of sustainable construction practices is critical to reduce adverse impacts on climate change and environmental degradation. The construction, operation, and demolition of building and infrastructure projects has contributed to air, noise, and water pollution, and has generated landfill waste. In the last decade, construction project participants have been developing sustainable construction management practices to decrease the level of this pollution to make the Earth more livable. This Special Issue focuses on the various project management practices used by the project participants throughout the life-cycles of construction projects to make them environmentally sustainable. This includes practices used to increase sustainability that are related to environmental rules and regulations, planning, project delivery selection, contract procurement, design management, construction, operation, maintenance, and demolition. The main purpose of this Issue is to provide a body of knowledge related to sustainable construction management practices to owners, designers, contractors, and facility managers.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
