Application of Remote Sensing for Sustainable Development of Urban and Rural Areas

Message from the Guest Editors

Urbanization has been an irreversible and accelerating process over the last several decades, and is highly associated with population growth, air pollution, profound changes in landscape patterns and processes, higher temperatures in urban areas than in rural areas, etc. From many perspectives, such anthropic activities give rise to differences between urban and rural areas. Urban and rural areas have attracted many researchers to study their potential sustainable development, including ecological, cultural, political, institutional, social and economic components, among others. However, sustainable development should be addressed in detail in the context of its theoretical concepts and practical application. Due to large-scale and dynamic observation characteristics, remote sensing technology has been an indispensable tool for the environmental monitoring of sustainable development. New urban and rural sustainable development strategies have to be elaborated and ecologically friendly to improve landscape design and infrastructure planning with a more comprehensive design, leading to a more enjoyable living environment and higher quality of life.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
